

eManageIT™ Quality Checkweighing System. The Complete Solution For Weight-Based Quality Control.

Turn weight accuracy into customer satisfaction and quality assurance with the eManageIT™ Quality Checkweighing System (QCS).

A high precision, continuous motion checkweighing system, it is custom configurable for any industrial product application.

Developed by CODEplus, eManageIT™ QCS captures the product ID and the product weight. It compares the actual weight against the product expected weight for pass or fail decision, taking into consideration a user configurable weight tolerance. In case the product does not meet weight accuracy requirement, eManageIT™ QCS provides a trigger for identification and tracking of the defective product.

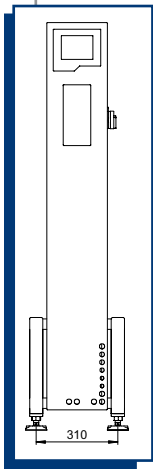

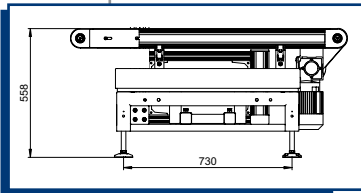

eManageIT™ QCS consists of an industrial OCS in-motion checkweigher with weighing conveyor unit and control tower. It also includes an omni-directional barcode scanner and server computer with eManageIT™ application software.

eManageIT™ QCS is a **compact and modular solution**, based on OCS dynamic weighing technology. It easily integrates with any existing material handling infrastructure. As a network ready system, it features integrated interfaces to ODBC compliant product databases and peripheral systems. Further, eManageIT™ QCS is designed to operate in a multi-system linked production environment.

With eManageIT™ QCS, you'll enjoy **significant benefits**—including 100% incoming and outgoing product quality control. The system helps to reduce quality control labor cost, while increasing customer satisfaction through more accurate product shipments.

**For Superior Checkweighing Solutions,
Choose the eManageIT™ Quality Checkweighing System.**

Discover how this powerful system can maximize your product quality control, reduce labor costs, increase productivity, and enhance customer satisfaction. For more information, contact CODEplus today.

The eManageIT™ Quality Checkweighing System: Powerful Capabilities and Extraordinary Benefits For Your Operation.

Capabilities

- Reads Product Identifications (Barcodes, RFID)
- Conveyor Speed up to 600 Feet Per Minute
- Determines Product Quality Compliance Based on Configurable Weight Criteria
- Provides Interface for Identification and Sorting of Non-compliant Products
- Provides Operational Performance Reports

Benefits

- **100%** Incoming and Outgoing Product **Quality Control**
- **Reduced** Direct and Indirect Quality Control **Labor Cost**
- Increased Supplier Control Concerning Incoming Production Components
- **Increased Customer Satisfaction** Through More Accurate Product Shipments
- Enhanced Productivity Through Real-Time Statistical Performance Measurement

System Components (Base Unit)

- *Industrial OCS In-motion Checkweigher:* In-motion Weighing Conveyor Unit and Control Tower With Touchscreen
- *Industrial Omni-directional Barcode Scanner*
- *Server Computer:* including eManageIT™ Application Software

CODEplus Overview

CODEplus is a leading provider of logistics automation solutions based in the Washington, D.C. metropolitan area. We specialize in developing software applications and systems for logistics, warehousing, and distribution enterprises around the world. CODEplus features innovative services and products to meet the dynamic needs of today's logistics industry.
