

ATS DESKTOP

ATS® Desktop is a joint product solution from CODEplus—the designer of the original PostalOne!™ prototypes—and Intermec Technologies Corporation, a global leader in the development, manufacture, and integration of automated data collection and mobile computing systems.

ATS Desktop offers commercial mailers who participate in **USPS PostalOne! business partnership** increased efficiency and enhanced performance by streamlining the acceptance process at the mailer's site.

ATS Desktop system is a rapidly deployable, economical system that automatically assigns Surface and Airline Transportation. With configurable error messages and built in backup/restore options, ATS Desktop reduces mistakes and inaccurate handling as well as ensuring critical information recoverability. An intuitive GUI, based on established mail-handling system models and Windows NT® technology, provides easy-to-use functionality and real-time transaction feedback.
