

❖ eManageIT™ Product Tracking System

❖ Overview

eManageIT™ Product Tracking System is a state-of-the-art, mobile tracking system for custom configurable any industrial product application.

The scalable, flexible and configurable architecture easily integrates with existing IT infrastructures. The system solution has integrated interfaces to:

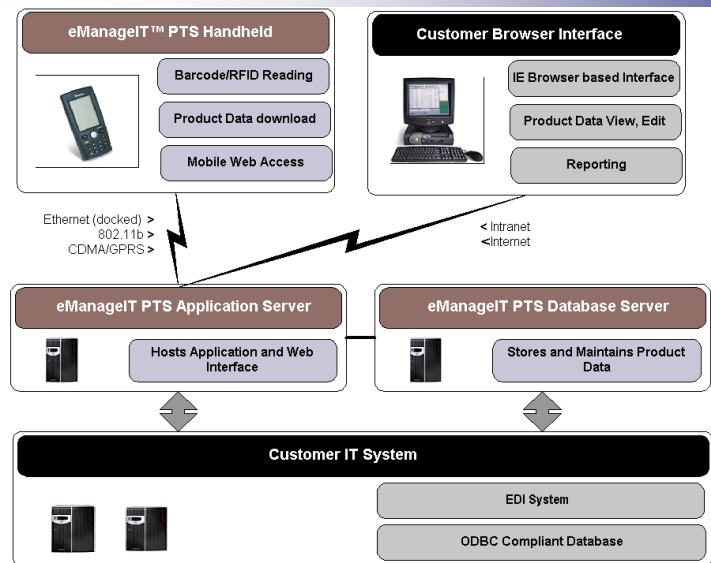

- ODBC compliant Product Databases
- EDI "EDIFACT" electronic interchange solutions
- Fixed Barcode Scanning Peripherals

and is designed to operate in a web-based **nationwide, multi-facility** production and distribution environment.

❖ Benefits

eManageIT™ Product Tracking System provides you with **100% Control** of the **status and physical whereabouts control** of your Products **nationwide**, while:

- Reducing direct and indirect Product Tracking Labor
- Increase Product Inventory and Tracking accuracy
- Reduced Product Inventory cost through real-time, remote data access and reporting

❖ Features

eManageIT™ Quality Product Tracking System is designed to:

- Track and trace Products using barcoded labels or RFID technologies and state-of-the-art industrial handheld devices
- Support wireless (802.11b, CDMA, GPRS) as well as standard Ethernet communications
- Provide an easy-to-use web-interface for real-time tracking of Products, and
- Provide product status, historical trend and other business Reports

❖ System Components (Base System)

- Industrial, mobile scanning device
- eManageIT™ PTS Database Server
- eManageIT™ PTS Web Server
- Mobile or stationary Barcode Printer (optional)
