

❖ MANUAL-SCAN-WHERE-YOU-BAND II — MSWYB II

Windows-based Manual-Scan-Where-You-Band II (MSWYB II) is an updated version of MSWYB, a standard unit of USPS Mail Processing Equipment (MPE). MSWYB II's application has been moved from a DOS environment to a Windows-based operating system utilizing the latest processor platform. The system uses off-the-shelf peripheral components, such as an ARCNET card, printer, scale, handheld scanner, etc. The use of a Windows platform improves the quality of the user interface, making it more intuitive and simple to use, and enhances the security of the system. MSWYB II system assigns and dispatches mail to airline and surface transportation assignments, and interfaces to the Transaction Concentrator (TC). Operators scan the distribution label to obtain the ZIP Code and mail class information, or enter the information using the keypad. The mailpiece is weighed and the collected information is processed and a request is sent to the TC for assignment. The TC responds with a routing assignment and a label is printed. MSWYB II can also make bulk mail assignments.

RELIABLE, ROBUST COMPONENTS

- Windows-based PC
- Intermec Printer
- Intermec Handheld Scanner
- Scale (Weigh-Tronix or Pennsylvania)
- User Documentation
- 1 year warranty

With its new Windows interface, MSWYB II is poised to become a standard component of mail processing equipment for the 21st Century.

- Point and click features from Windows are combined with familiar features from the first generation MSWYB for continuity and ease of use
- The system Graphical User Interface (GUI) is intuitive and requires no additional training for the current MSWYB Operator
- Each button on the screen displays its keyboard hot key, increasing processing time
- A transaction log facilitates system troubleshooting and monitors processing
- Online Help is available

Using Windows built-in security, the system is set up to launch the MSWYB II application with the start up of the Operating System, and requires a valid user name and password to exit the application or access the maintenance screen, preventing unauthorized use of the workstation.

MSWYB II CHARACTERISTICS

- Windows-based platform
- Easy-to-use GUI with visible error detection and online help
- TCP/IP ready
- Transaction logging
- Support for existing peripherals
- Label printing quality test

OPTIONS

- Extended Warranty
- Help Desk Support
- On-site Installation
- Touch screen monitor
- Ergonomic Table
